made king by the oracle of Apollo, who is said to have then tied up his utensils of husbandry in the temple, and in a knot so intricate that no one could find out where it began or ended. An oracle declared that he who should untie this knot should be master of Asia. Alexander, fearing that his inability to untie it should prove an ill augury, cut it asunder with his sword. Hence, in modern language, a Gordian knot is an inextricable difficulty; and to cut the Gordian knot is to remove a difficulty by bold or unusual measures.

## I.

**I, y, or äe, a.** Is in English considered both as a  
vowel and consonant.—*Johnson*. By what con-  
tact of the organs is the consonant sound produced?  
—**J. K.**  
**I, vowel, has:** a long sound, as *fine, thine*, which is  
usually marked by an *e* final; and a short sound, as  
*fit, thin*. Prefixed to *e*, it makes a diphthong of the  
same sound with the soft *i*, or double *e*, *ee*: thus,  
*field, yield*, are spoken as *feeld, yeeld*; except *friend*,  
which is spoken *frend*. Subjoined to *a* or *e*, it makes  
them long, as *fail, neigh*; and to *o*, makes a mingled  
sound, which approaches to the motion of a diphthong,  
as *oil, coin*. The sound of *i* before another *i*, and at  
the end of a word, is always expressed by *y*.—*Johnson*.  
There is only one vowel sound in *field, feild*. "Oil,

oil, coin, approaches to the notion of a diphthong."  
—*Johnson*. It does not "approach the notion;" but  
it touches the sound, "of a diphthong," for it is ac-  
tually a full one, composed of *ä* and *e*, both long, *äe*,  
*äé*, *äél*, *käén*.—**J. K.**

**NEGOTIATOR**, nè-gò-shè-à't-àr, *n.* One employed to treat with others. [Though I have admitted the sound of sh, instead of the simple s, into all the above words, except this last but one, from which I have ejected it, in order to avoid the double sound of sh in the same word, I would prefer the sound of the s, in the pronunciation of all, as I have done in a number of other words; but the above words are in so common, every-day use, that I fear the inveteracy of custom could not be overcome by any showing of mine, that the sound of the s is easier to the organs, and more agreeable to the ear; and therefore I have admitted the sh, because that, in my corrections, I war not so much with general custom, as with absolute vulgarity, absurdity, and the pelantry of distorting words, such as *educate*, from the simplicity of the spelling, by substituting a difficult compound sound, formed of a consonant and a single vowel, in the place of a diphthong of the most striking euphony, which, with perfect ease to the organs of articulation, follows the sound of d, making the pronunciation of the whole word pleasing to the ear, without any alteration of the letter u: thus, èd-u-kàt; èl-u-kà-shùn; èd-u-kàt-ìng; instead of Mr. Walker's èd-jò-kà-shùn, èd-jò-kàte, èd-jò-kà-ìng. Now the consonants, as Mr. Sheridan says, are the “nerves and sinews of a language;” and nothing contributes more to clearness, distinctness, and force, in the delivery of a public reader, or speaker, than his perfecting the articulation of every consonant, which custom will allow to be sounded in the common pronunciation of every word in the language.—J. K.

## S.

**S**, <sup>1</sup>s', Has in English the same hissing sound as in other languages, and unhappily prevails in so many of our words that it produces in the ear of a foreigner a continued sibilation. In the beginning of words it has invariably its natural and genuine sound: in the middle it is sometimes uttered with a stronger appulse of the tongue to the palate, like *z*; as *rose*, *roseate*, *rosy*, *osier*, *nose*, *resident*, *busy*, *business*. It sometimes keeps its natural sound; as *loose*, *designation*. In the end of monosyllables it is sometimes *s*, as in *this*: and sometimes *z*, as in *as*, *has*; and generally where *es* stands in verbs for *eth*, as *gives*.—*Walker*. The above assertion of a "continued sibilation" is a very great mistake, arising from the grossest ignorance of the actual pronunciation of our words, and of pronunciation in general, as a part of every language; and the absolute fact is, that the English language does not abound so much in the sound of *s*, as either the Greek or Roman; and that, in hundreds of syllables, in which foreigners suppose it to be sounded *s*, it is really sounded *z*. Beside this, in the third person singular, of every verb, it is sounded *z*; and in the double *s*, in great numbers of syllables it is sounded *eth*; or *esh*, and the single *s* also, as in *vision*, *decision*, *salesman*, *vish-ŭn*, *de-sizh-ŭn*, *sŭlz-mān*, and in the plurals of almost all nouns, it is sounded *z*. Reader, try thousands of plurals. It is contrary to all harmony, and the rules of accent; it is in fact barbarous in articulation, to dwell upon the sound of any consonant, when it commences a word, for this simple reason, that no consonant, nor union of consonants, as in *strength*, *strive*, *grind*, *ground*, at the commencement of a syllable, can be dwelt on without disgusting a nice, and judicious musical ear; because *it*, or *they*, cannot be accented; the consonant, invariably, throughout our nervous, beautifully constructed language, always ending the syllable. However, therefore, the admirers of a late celebrated actor may have been pleased with his invariably grinding out such consonants, I hesitate not to say, in the very teeth of ignorance of verbal criticism, that the custom was barbarous in the extreme; and that a Greek, or Roman audience, would have hissed him off the stage, as Demosthenes was hissed till he reformed his

pronunciation. The *s*, therefore, or any other consonant, or combination of consonants, is never dwelt on by good English speakers when it begins a word; and, when it is followed by any vowel, or diphthong, it flows sweetly into that vowel, or diphthong, as if it were itself a vowel, as in *sŭlt*, *sŭct*, *sŭng*, *sŭm*, *sŭep*, *sŭrm*, &c.—*J.
